Te Whare Wānanga o Waikato

Objectives and results summary

- To investigate the fish community and relative abundance in the Ohau Channel
- Length fished 2.42 km at a total of 10 sites, 10-20 min shots
- Assuming 1-m radius around anodes, width fished was 4 m
- Area fished 9,680 m² (0.97 ha)
- Caught 391 fish (921 in 2010)
- Three native fish species - common bully, common smelt, longfin eel
- Four introduced species - rainbow trout, brown trout, goldfish, gambusia
- Very few smelt in 2011 but more eels, 2 koura caught

Fishing sites

Fish numbers 2011

Site	Time fished (min)	Distance fished (m)	Area fished (m ²)	Number of fish								Total
				Common bully	Common smelt	Goldfish	Longfin eel	Rainbow trout	Juvenile trout	Brown trout	Koura	
Ohau 1	10	330	1320	37	2	0	2	1	4	0	0	46

Conclusions

- Bullies usually most abundant fish species
- Reduced smelt numbers since 2009
- Longfin eels a consistent feature
- More goldfish in 2011

Acknowledgments

- Field and lab assistance from Ray Tana, Jeroen Brijs, Dudley Bell, Jennifer Blair and Grant Tempero
- Ray Tana and Jeroen Brijs – analysis of data and report preparation
- Project funded provided by BOP RC contracts
