

Catchment Economic Tools

- Could well have different policy approaches/settings for the different lakes
- Need to look at achieving different TPIs (within & between lakes) – what is the cost of this/how can this be costed
- Need to identify costs & benefits & where they fall
- These “costs/benefits” are wider than just \$ - how do we compare financial cost against environmental gain for eg (Do we consider Choice Modelling (again as an eg) in an attempt to monetise some of these intangibles)??
